DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-18, 24-27, 28-31, drawn to conjugates comprising a targeting compound and a nitroreductase, and to nitroreductases.

Group II, claim(s) 19-23, drawn to nucleic acids encoding a nitroreductase.

Group III, claim(s) 32, 33, drawn to methods for detection of plasmid loss.

Group IV, claim(s) 34-37, drawn to kits comprising nitroreductase substrates.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I relates to the technical feature of a nitroreductase, group II relates to the technical feature of a nucleic acid molecule that encodes a nitroreductase, group III relates to the technical feature of the detection of oligonucleotids, and group IV relates to the technical feature of the nitroreductase substrates. The inventions of group IV lack unity with the inventions of groups I, II and III, because the inventions of group IV comprise nitroreductase substrates, which are entirely different compounds than the protein that uses them. The inventions of group I lack unity with the inventions of group II and III, because nucleotides encoding nitroreductases are known (see Tomb et al, Nature 388: 539-547, 1997),

Art Unit: 1642

therefore, nitroreductase products are known and therefore, neither the polypeptide nor the polynucleotide may be said to be special technical feature. The same is true for the lack of unity between inventions groups II and III.
